VISIT SITE

Install IE Tab from the Chrome Web Store

Once it's installed, you should see the IE Tab icon to the right of the Chrome address bar.

Now navigate to any page and click on the IE Tab icon to open the page with the IE rendering engine. That's it!

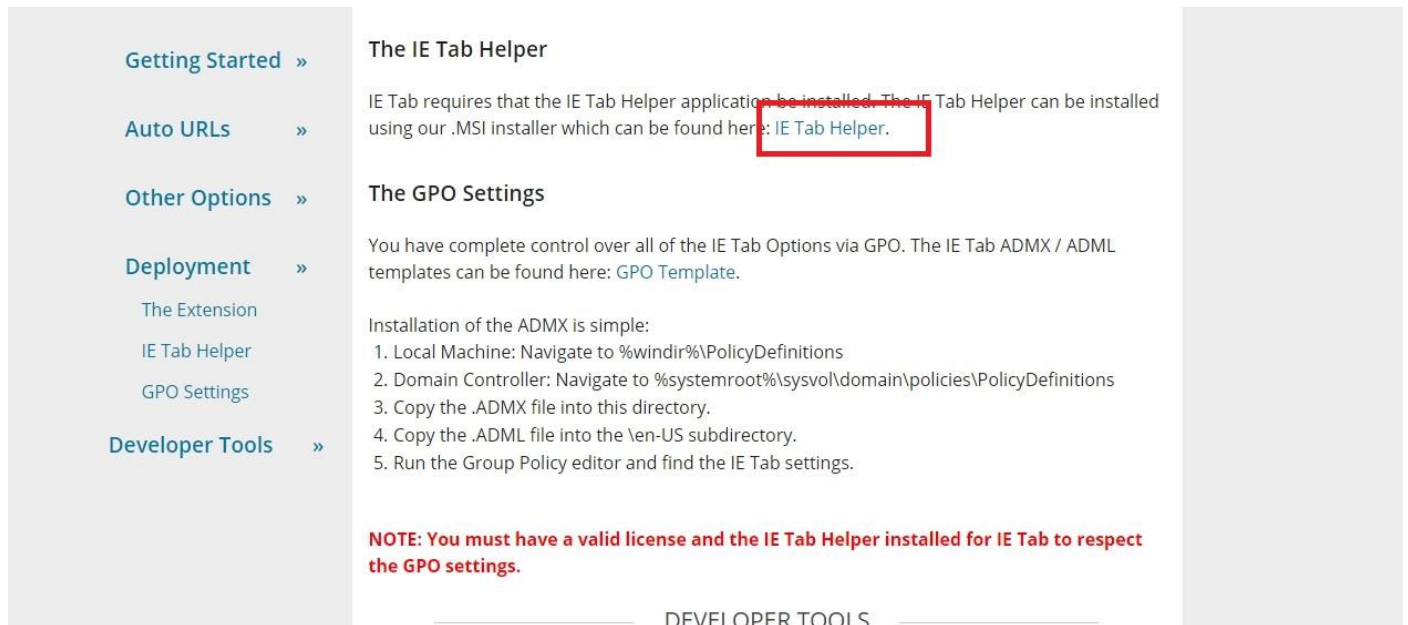

AUTO URLS

Right-click on the IE Tab icon and select "Options" to see all of the options, including the Auto URLs.

Auto URLs are one of the most important features of IE Tab. You typically need IE Tab for just a subset of the web pages you visit. For example, you might want to use IE Tab for all of your Microsoft Sharepoint pages. Auto URLs enable you to specify which pages should be opened in IE Tab automatically so you don't have to click on the IE Tab icon.

Auto URLs are specified as a filter string in one of two ways:

2. 點選 IE Tab Helper

The IE Tab Helper

IE Tab requires that the IE Tab Helper application be installed. The IE Tab Helper can be installed using our .MSI installer which can be found here: **IE Tab Helper**.

The GPO Settings

You have complete control over all of the IE Tab Options via GPO. The IE Tab ADMX / ADML templates can be found here: [GPO Template](#).

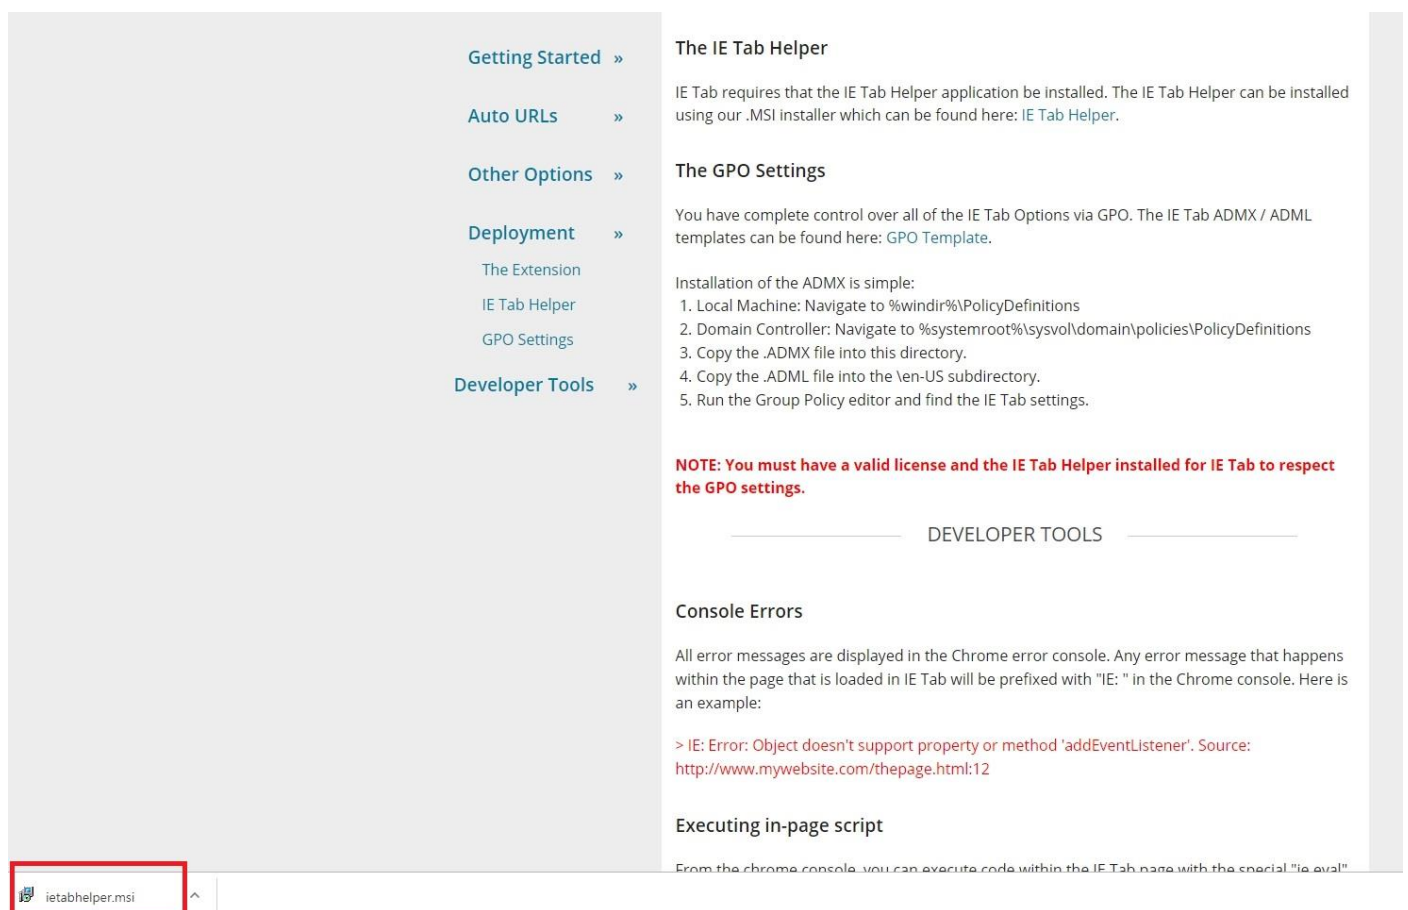

Installation of the ADMX is simple:

1. Local Machine: Navigate to %windir%\PolicyDefinitions
2. Domain Controller: Navigate to %systemroot%\sysvol\domain\policies\PolicyDefinitions
3. Copy the .ADMX file into this directory.
4. Copy the .ADML file into the \en-US subdirectory.
5. Run the Group Policy editor and find the IE Tab settings.

NOTE: You must have a valid license and the IE Tab Helper installed for IE Tab to respect the GPO settings.

DEVELOPER TOOLS

Console Errors

All error messages are displayed in the Chrome error console. Any error message that happens within the page that is loaded in IE Tab will be prefixed with "IE: " in the Chrome console. Here is an example:

```
> IE: Error: Object doesn't support property or method 'addEventListener'. Source: http://www.mywebsite.com/thepage.html:12
```

Executing in-page script

From the chrome console, you can execute code within the IE Tab page with the special "ie.eval"

ietabhelper.msi
